

Sulphur World Symposium 2014

Long Beach, California, USA | April 7-9, 2014

The Sulphur Institute is proud to host the Sulphur World Symposium 2014 — an annual event that attracts sulphur industry leaders for two days of expert speakers, networking events, and industry tours. TSI's last symposium held in North America brought together senior management delegates from various aspects of the sulphur industry. TSI is projecting record-breaking attendance at this year's event in Long Beach, California, USA.

Improvements in Molten Sulphur Cargo Tank Transportation

Neil McInnis — Vice President
Schiber Truck Company, Inc.

This presentation will inform delegates about recent activities and related safety and handling improvements for over-the-road cargo tank transportation of molten sulphur within North America. These advancements in the industry were aided through The Sulphur Institute's (TSI) Road Transportation Task Group (RTTG), which was formed to discuss and share safe practices while brainstorming alternatives for improving the handling of sulphur.

Within its past meetings, TSI's RTTG aimed to discover both short and long-term situations regarding road transportation, especially with loading and unloading of molten sulphur, and discuss other issues facing the industry such as driver safety, H₂S exposures, fall protection, and prevention of burns and spills. Throughout this presentation, improvements and solutions designed to address these issues and improve safety of sulphur transport in cargo tank trucks will be summarized and explained for the audience.
